How to – Dynamically change the label text for an input control

For everyone's reference, this works to change a label attached to a field:

```
trans_data1_ctl! = callpoint!.getControl("ART_CASHHEADER.TRANS_DATA1")
trans_data1_lbl! = sysgui!.getWindow(trans_data1_ctl!.getContextID()
).getControl(trans_data1_ctl!.getID()-1000,err=*next)
trans_data1_lbl!.setText("test")
```

or to make life easier:

```
def fnlabelchange(temp_field$,temp_newtext$)
          temp_ctl!callpoint!.getControl(temp_field$)
          temp_lbl! = sysgui!.getWindow(temp_ctl!.getContextID()
).getControl(temp_ctl!.getID()-1000,err=*next)
          temp_lbl!.setText(newtext$)
fnend
```
